2 Upload Options:
- Option 1 - Simple Upload using VRCFury (HIGHLY Recommended!)

- Option 2 - Manual Upload
   (Only recommended if you are experienced with Unity and plan to make animator edits)

Upload Tutorial

Download:
- **Penis Unity File:** This is located in your library on Gumroad
- **Poiyomi Toon Shader** (only if you don't already have it in your project): https://github.com/poiyomi/PoiyomiToonShader/releases
  - If you're using one of my avatars you probably already have this in your project
- **VRCFury:** https://gitlab.com/VRCFury/VRCFury/-/releases
- **NSFW Extras** (Only for Canine avatar!!!): Available in your library on Gumroad

Step 1:
Import everything you downloaded into your project with your avatar

Step 2:

Open up the Penis folder, choose the preset you would like to add, and drag it directly onto your avatar

Step 3:

Adjust the position/scale of the prefab. For the canine avatar it will not have to be moved or scaled

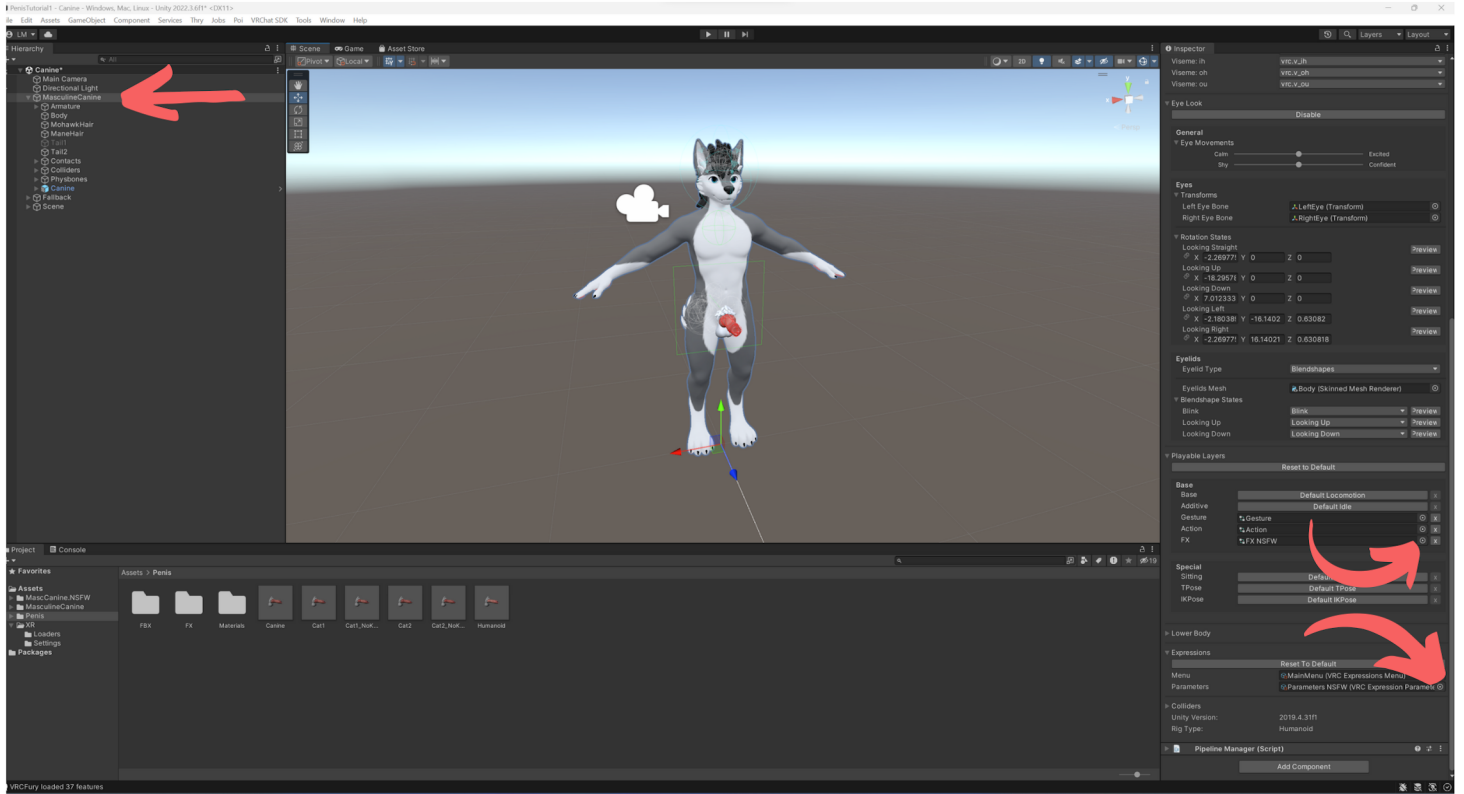

MAKE SURE THE PREFAB IS PLACED EXACTLY LIKE THIS

Step 4:

If you're using any avatar other than the Canine then that's it! You can go ahead and upload. For the Canine, continue with the next couple of steps to add the extra menu and textures.
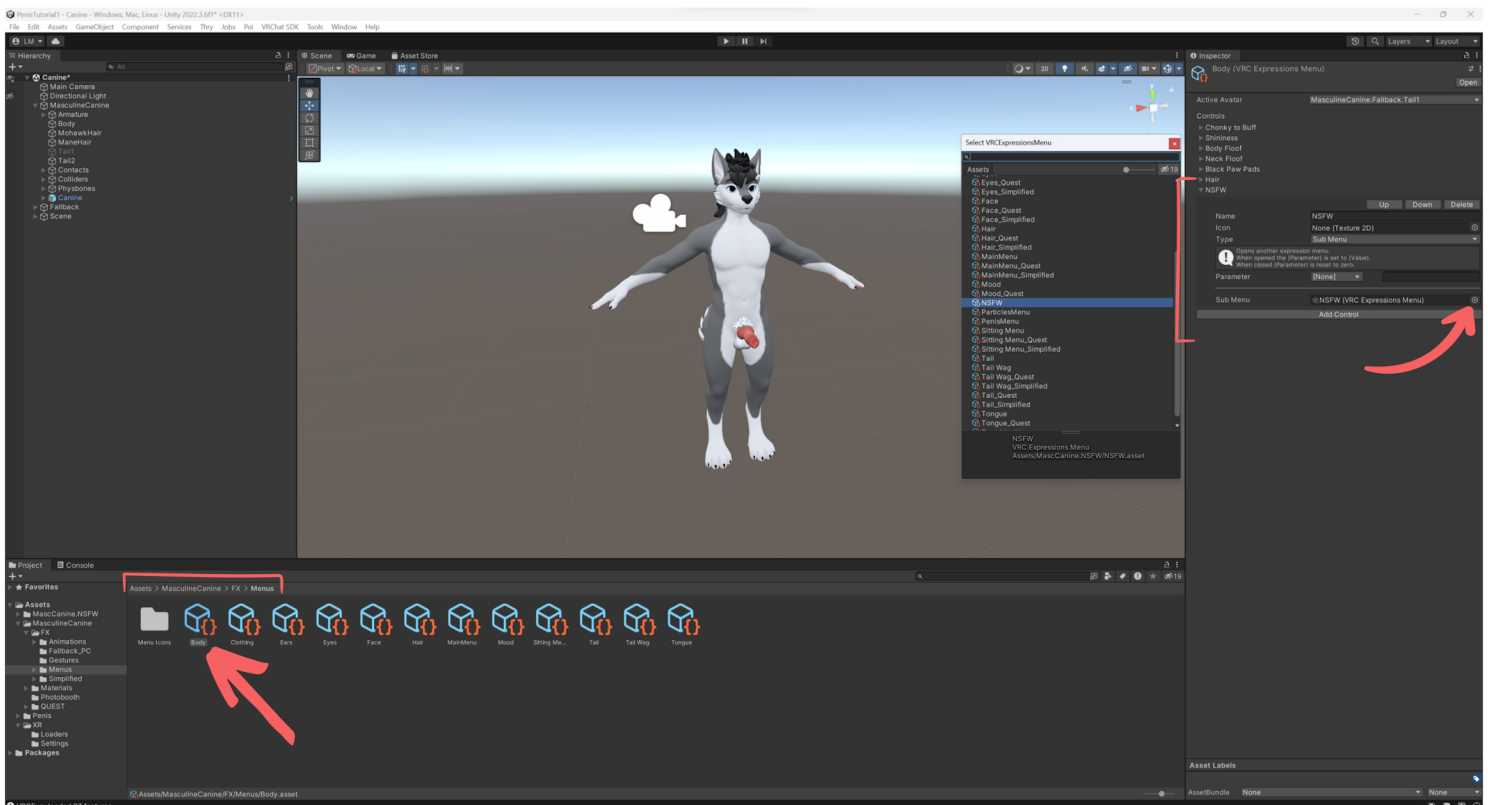

Step 5 (Canine Only):

Select the avatar in the Hierarchy and then in the Avatar Descriptor on the right, set the FX layer to FX NSFW and the Parameters to Parameters NSFW
If you don't have these then you didn't import the NSFW extras package

Step 6 (Canine Only):

Select the menu you want to add the additional canine NSFW menu to, click Add Control, name it, change the type to Sub Menu, and input the NSFW menu

Step 7 (Optional):

Apply your nsfw material if you have one

- For the canine avatar, I have included a butthole .png texture that you can drop on top of your custom body texture.

DONE ^^
