

**Sons of horus – praetor
black cloak
PDF tutorial**

Paints used :

- Abaddon black
- Corvus black
- Dark blue grey (Vallejo mc)

Before we start painting the miniature, we locate the light reflections on the cloak parts, by taking a picture of it under our desk lamp. For this specific model, i have chosen to have 4 angles of light. I primed it in Chaos black as it has a great shine to it. I have added a guide for how to locate light reflections in the patreon post.

We start by basecoating the cloak with a 2:1 mix of corvus black & abaddon black. We furthermore glaze the frame of the light reflections with pure corvus black – add 2 parts of water.

We now add 1/3 part of dark blue grey to the corvus black & glaze towards the center of the light reflections.

We now add a $\frac{1}{2}$ part of dark blue grey to the previous mix & glaze the center of the light reflections. We furthermore glaze the untouched areas, with pure thinned down abaddon black – add 2 parts of water.

We now add 1 full part of dark blue grey to the previous mix & glaze the very center of the light reflections – we furthermore add small scratches by painting thin lines & dots with the same mix – add 2 parts of water. Done 😊 !
