

<b>Model Name</b>						
Really Annoying Card Container v2.0						
<b>Model Description:</b>						
<p>The Really Annoying Card Container ver. 2.0. This design is essentially 5 boxes nested within each other, and 296 bolts you have to remove to get inside. The innermost box is designed to accomodate gift cards, a wad of cash, car key, or other small items.</p> <p>There are also 5 different bolt variations, so you can make it extra annoying.</p>						
<b>Printing Info:</b>						
**These are just the settings I used to test the model, feel free to use whatever settings work best for you.						
FDM or Resin:	FDM					
Scaling:	Can be scaled up, bolts likely won't work well if scaled down.					
Supports:	None					
Infill/Perimeters:	15% infill + 2 perimeters, 3 perimeters for bolts and screwdriver.					
Nozzle Size:		0.4				
Layer Height:		0.2				
<b>Printing &amp; Assembly</b>						
<p>No supports are needed for this model, just print the pieces in the orientation that they import and assemble after printing. You will need to print all of the pieces, plus 296 bolts. Boxes 1-3 are what made up the original Really Annoying Gift Card Container with 134 bolts. Boxes 4 and 5 were added later, and can also work as a standalone gift box or obviously add them to the original 3 to get 296 bolts!</p> <p>I have included 5 different types of bolt heads so you can make it as annoying as you want! There are also 5 different "screwdrivers" you can print, or use actual tools!</p> <p>I have included a "thread test" file so you can make sure that the bolts are going to fit into your box before you print all of them! Make sure to print the thread test in the orientation that the file imports in. The female part will be printing vertically, so it needs to be tested in that orientation.</p>
